LANCOM Systems presents Wi-Fi solution for sophisticated interiors

Hotspot-enabled Wi-Fi access point in a purist elegant housing

Aachen, October 13, 2015—LANCOM Systems, the leading German manufacturer of networking solutions for the commercial and public sectors, launches the LANCOM LN-830acn dual Wireless, a new access point that discreetly fits in with sophisticated interiors. A software option upgrades the access point to a high-performance hotspot for guests, and integration into the leading hotel management systems such as Micros Fidelio and protel is also possible.

The housing of the new LANCOM access point comes in a style that is low-key: The appealing matt white color, the antennas inside the housing and the logo etched into the surface help to integrate the device into modern hotel and conference environments so it fits in with any design. The LED lights are integrated discreetly and, if necessary, can be turned off completely. Finding the ideal place for the access point in the lobby, meeting room or hotel room is simple with this new model: A drilling template together with the four non-slip rubber feet on the housing allow for easy installation on the wall, ceiling, or any flat surface.

Whether it is concealed or displayed in the open, there is no need to worry this new model

being stolen. With the help of the drilling template shipped with it, the optionally available anti-theft wall mount accommodates the access point, which simply clicks into it. In combination with a Kensington lock, anti-theft protection is assured.

High-performance guest Wi-Fi

In addition to these aesthetic and practical aspects, the LN-830acn access point meets a popular demand from hotels and restaurants: The ability to offer their guests fast Internet access via Wi-Fi. Installing the LANCOM Public Spot option upgrades the device to a powerful Wi-Fi hotspot.

The hotspot features a login portal that is flexibly programmable and adaptable to any corporate design. It is also possible to invoke a mandatory set of T&Cs. The login data is issued by a voucher or by means of an SMS-based self-registration. Accounting systems are easy to set up by using the FIAS interface to seamlessly integrate the solution into property management systems (PMS), such as Micros Fidelo or protel. If preferred, access can also be offered for free.

Like all Wi-Fi solutions from LANCOM, the LN-830acn supports separate networks for guests and staff and is equipped with an extensive range of security features, including full IEEE 802.11i with WPA2 and AES encryption, and IEEE 802.1X/EAP (WPA2 Enterprise).

The LANCOM LN-830 acn dual Wireless is available now.

?

LANCOM Systems background:

LANCOM Systems GmbH is the leading German manufacturer of reliable, innovative network solutions for business customers. LANCOM's two business units, VPN Network Connectivity and Wireless LAN, offer professional users secure, flexible infrastructure solutions for local-area and multi-site networks. The entire core product range is developed

and manufactured in Germany. In addition, LANCOM also provides VPN solutions certified by the German Federal Office for Information Security (BSI) for the protection of particularly sensitive networks and critical infrastructures (EPCIP) against cyber attacks. LANCOM Systems has its headquarters in Würselen near Aachen, Germany, and other offices are located throughout Europe. Customers include small and medium-sized enterprises, government agencies, institutions, and major corporations from Germany, Europe and increasingly worldwide. The enterprise is a partner in the Alliance for Cyber Security initiated by the BSI.
